

Obol

Programmable pay-per-read for AI agents

AI can buy information — but it needs rules, not a blank cheque

The missing primitive

Creators cannot price a single machine read. Agents cannot prove why a source was worth paying for. Ordinary subscriptions hide both marginal value and accountability.

Obol turns each read into a policy-governed USDC decision.

PRICE

Creators set a per-read price as low as one cent.

DECIDE

The agent buys, reuses, skips, or stops under explicit guardrails.

PROVE

Every choice carries a human-readable audit and settlement mode.

The proof lives inside the product.

Run it. Verify it.

Set a \$0.05 budget, then inspect every buy, skip, and stop decision alongside the receipt.

The server checks the transaction hash, payer, USDC contract, recipient, amount, block, and block hash against Arc RPC.

ARC TESTNET · LIVE RPC CONFIRMED

One request becomes a priced, explainable, auditable transaction

01 · SCORE

Rank value
Score relevance per
dollar and detect
redundant coverage.

02 · SETTLE

Apply policy
Enforce reserve, max
price, min relevance, and
purchase count.

03 · RECEIPT

Explain outcome
Return answer, receipt,
balances, rule ID, and
stop reason.

One cent bought the evidence; four cents stayed under policy

Verified Arc Testnet run · 2026-08-06

0x03a7e7c9...2809 settled 0.010000 USDC in block 55,584,226. The agent bought one high-relevance source, skipped 20 weak or redundant candidates, and stopped at 67% coverage.

ARC CONFIRMED · BLOCK 55,584,226

\$0.050

Budget

\$0.010

Arc-settled

\$0.040

Preserved

Arc proof binds the receipt to one exact USDC transfer

46 backend tests passed

Strict evidence match · health 200 · x402 402→200

Agent policy

A deterministic policy authorizes spend and preserves a \$0.005 reserve.

Circle Wallets

A COMPLETE transaction settled 0.010000 USDC from the agent payer to the creator.

Arc verifier

Server-side RPC binds payer, USDC contract, recipient, amount, block, block hash, and transaction hash.

SHIP STATUS

PUBLIC · ARC PROOF VERIFIED

Agents read.
Creators get paid.
